

German domestic migration 2006

Type Raster Dataset

Tags Migration, Germany, Domestic, Intranational

Summary

This dataset is intended to be used to show internal migration flows within Germany at a state level for the year 2006.

Description

This dataset contains the amount of incoming and outgoing people for each German state. The incoming and outgoing people are divided into the origin and destination states. Each migration stream is represented as one table entry, containing the names of the origin and destination states and the total annual amount of people. Each migration stream is also associated with geographic data comprising the origin and destination state polygons (represented as WKB) and additionally the derived centroids of the respective states (represented as lat-lon values).
